EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with Craig Stainbrook on 5-1-02.

2. The application has been amended as follows:

B1

- Claim 15, line 6, after "container", ~~in communication with a sludge dewatering device~~ of a liquid treatment facility ~~has been added.~~

- Claim 17, line 2, "control" has been replaced with ~~controls~~.

- The following new claim has been added:

B2

~~23.~~ The gravity flow sludge load-out system of claim ~~15~~, wherein said sludge dewatering device is a centrifuge.

- In the specification, page 5, line 8, after "application", ~~—09/642,245—~~ has been added.

- The ABSTRACT has been ~~replaced~~ with the following on a ~~separate~~ sheet in the specification:

—A gravity flow sludge load-out system for rapid and accurate loading-out of large volumes of treated biosolids from a wastewater dewatering plant, said system includes a plurality of hoppers 12, 14 supported by a main structure 16 having a plurality of vertical support members 20, each

Art Unit: 1723

resting on a load cell 28, a sludge inlet at the tip of each hopper, and hydraulically controlled metering gates 40 at the bottom. A PLC 70 controls delivery of sludge from a dewatering facility, including e.g. a dewatering centrifuge 56, into the hoppers and then controls load-out of the sludge to a container truck by providing real-time monitoring of net sludge load-out and tight control of metering gates.—.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

- The closest cited art—Ladt et al. (U.S. 4,580,698) and Ciaffone (U.S. 3,844,945)—fail to anticipate or render obvious, alone or in any proper combination, a gravity-flow sludge load-out system including a plurality of hoppers having control means to control the loading of sludge into the hoppers via powered slide gates and the load-out of sludge from respective metering gates, wherein the refill control means automatically controls the slide gates and the order and rate each hopper is filled and wherein the sludge container is in communication with a sludge dewatering device of a liquid treatment facility.
- Ladt et al. fails to teach more than one hopper, the aforementioned refill means, and the container in communication with a sludge dewatering device. Ciaffone is also not in communication with a dewatering device: his hoppers store *aqueous* sludge. Ciaffone also fails to show the aforementioned slide gates and refill control means and is not concerned with metering the load out sludge via a sludge metering gate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.

Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
